Single Store Grocery Delivery App

A streamlined single-store **grocery delivery platform** designed to **simplify ordering, manage operations** efficiently, and **enable same-day deliveries** using internal resources.

Presented to

Mr. Pakhil Arora, Vaishali, New Delhi,
India

Presented by

Appspine technologies Private Limited Noida,

1. PROJECT OVERVIEW

This project involves developing a single-store grocery delivery application where both customers and delivery boys will operate within a single mobile app, supported by a web-based admin panel.

Customers can browse products, add items to cart, enter delivery address details, and place orders using Cash on Delivery (COD). The same app will include a separate login for **delivery boys to view assigned orders**, access customer address details, update delivery status, and confirm COD collection.

Orders will be managed and assigned manually through the admin panel, enabling **same-day delivery** using internal riders. The system will be fully address-based without any map integration, ensuring a simple, cost-effective, and easy-to-manage solution focused on quick deployment and efficient operations.

2. SCOPE OF WORK

The project includes the design and development of a single-store grocery delivery system consisting of one unified mobile application (for customers and delivery boys), along with a web-based Admin Panel and Staff Panel for operations.

2.1 Mobile Application (Customer + Delivery Boy).

The mobile application will support two roles with separate login access:

Customer Module:

- User registration & login (OTP)
- Product browsing (category-wise)
- Product details view
- Add to cart functionality
- Checkout with Cash on Delivery (COD) only
- Address entry (house no., street, landmark, contact details)
- Order placement
- Order status tracking (Placed → Confirmed → Packed → Out for Delivery → Delivered)
- Order history
- Basic notifications

Delivery Boy Module:

1. Login access
2. View assigned orders
3. Customer address & contact details
4. Call customer option
5. Update order status (Picked / Delivered)
6. COD collection confirmation

2.2 Admin Panel (Web-Based)

1. Dashboard (orders overview & status)
2. Product & inventory management
3. Order management (accept, pack, dispatch)
4. Manual delivery boy assignment
5. Delivery boy management
6. Customer management
7. Basic reports (orders & sales)

2.3 Staff Panel (Restricted Access)

1. Login access
2. View incoming orders
3. Update order status (Confirmed / Packed)
4. Assist in order processing

3. Delivery & Operations

1. Same-day delivery model
2. Internal delivery boys (company-managed)
3. Manual order assignment
4. Address-based delivery (no maps)
5. Status-based tracking (no live tracking)

4. INVESTMENT

Milestone	Percentage	Amount (INR)
Project Advance	30%	₹39,000
UI/UX Approval	30%	₹39,000
Before Deployment	20%	₹26,000
After Deployment	20%	₹26,000
Total	100%	₹1,30,000 + GST

5. DEVELOPMENT TIMELINE (8 WEEKS – 4 PHASES)

Phase	Duration	Work Description
Phase 1: Planning & Design	Week 1 – 2	Requirement finalization, workflow planning, wireframing, UI/UX design, and approval
Phase 2: Backend Development	Week 3 – 4	Database setup, authentication (OTP), product, cart, order management, COD flow APIs
Phase 3: Application Development	Week 5 – 6	Mobile app development (Customer + Delivery Boy modules), basic integrations
Phase 4: Admin, Testing & Deployment	Week 7 – 8	Admin & staff panel development, testing, bug fixing, final deployment and delivery

The project will be completed within **2 months + Beta Testing**

6. TECHNOLOGY STACK

Component	Technology	Description
Mobile App Development	Flutter	Cross-platform development for Android & iOS apps with a single codebase
Frontend (Admin Panel)	React.js	Interactive and responsive web dashboard for admin controls
Backend Development	Node.js	Scalable backend architecture with secure APIs
Database	MongoDB / PostgreSQL	Efficient data storage and management for users, orders, and transactions
Cloud / Hosting	AWS / Google Cloud / DigitalOcean	Reliable cloud infrastructure for scalability and performance

7. EXCLUSIONS & ASSUMPTIONS

1. The system will operate on COD with an address-based delivery model
2. Single-store setup with manual delivery assignment
3. Server, domain, and third-party services are not included
4. Delivery operations and rider management will be handled by the client
5. Features outside the defined scope will be treated as additional
6. Content and timely approvals must be provided by the client
7. Major changes may impact cost and timeline

8. SUPPORT & ACCEPTANCE

1. **2 months** of free post-launch support (bug fixes & minor adjustments)
2. Technical assistance during initial launch phase
3. Additional support available under AMC

Acceptance Terms:

1. Phase-wise approval required within 2–3 working days
2. No response will be considered as approval
3. Final delivery accepted after successful deployment
4. Post-approval changes will be treated as additional scope

“You **don't need another proposal.
You need a partner who actually **delivers** results.”**
